We are all familiar with following instructions that we receive or give from medical doctor, manuals, inscriptions, warnings, directives, guidelines, friendly advices...

- "Young children should only use **a pea sized amount** of toothpaste"
- "Only a **small amount** of anti-aging cream should be used to ensure that you will always look ten years younger"
- "You should mix **equal volumes** of resin and hardener to ensure a proper bond when using Epoxy Adhesives"
- "Use only a **Finger Tip Unit** of Pharmaceutical cream to cure your skin ailment"
- "Use **2-3g of Gel** 3 to 4 times per day"

Up until now, there has been no simple solution to the exact dosing of semi-solid products... and now... here is best possible solution available now!!!

MetriCap Closures

"puts an end to the measuring guessing game"

The **MetriCap Closure** was designed to easily quantify all of the above "quantities" and in the process make your life a lot easier. In its most basic form, the **MetriCap Closure** screws onto conventional **squeezable tubes** as a direct replacement for the "cap". **MetriCap Closure** will deliver only a pre-determined amount of semi-solid ointment, paste or gel when the tube is squeezed.

How the MetriCap Closure works

The MetriCap Closure consists of three plastic parts, all of which can be manufactured in high volumes through injection moulding. The MetriCap metered-dose dispensing closure fits onto conventional squeezable tubes. The operation is extremely simple and works on a very elegant 'charge-rotate-dispense' principle.

Three easy steps

- Step One: Align the revolving chamber with the tube outlet and squeeze the tube.
Step Two: Rotate the chamber through 180 degrees.
Step Three: Squeeze the tube.

Where can you use the MetriCap Closure?

MetriCap Technology has numerous applications ranging from pharmaceutical to food and beverage dispensing. Here are a few of the areas where MetriCap Closures can be used very successfully:

Applications in

- **Pharmaceutical**
